Education

Savitribai Phule Pune University 2023-2027
Bachelor of Engineering in Computer Engineering 8.44/10

Experience

Technical Team Member | *CodeStorm Club*

- Conducted technical workshops on C++ STL and data structures, strengthening participants algorithmic problem-solving skills.
- Designed algorithmic problems that test logic building and edge-case handling for college-level contests.
- Identified logical errors and taught debugging techniques to improve participant code quality.

Technical Skills

Languages: C, C++, Python, TypeScript, SQL.
Backend: FastAPI, Flask, Django, Next.js, WebSockets.
AI Agents & ML: LangChain, LangGraph, google-adk, MultiAgent Workflows, Embeddings, RAG.
Core Concepts: DSA, OOP, Software Engineering, AI, Computer Networks, Operating Systems, Distributed Systems.
Tools: Git/GitHub, CI/CD, Docker, HuggingFace, OpenRouter, Render.
Databases: SQL (MySQL, PostgreSQL), NoSQL (MongoDB), Neo4j, ChromaDB.

Projects

ASTRA | *Autonomous Security Orchestration & Reasoning Platform* GitHub

- Engineered an asynchronous orchestration engine for concurrent vulnerability scanning, incremental output parsing, and centralized finding correlation.
- Developed an agentic scan-planning workflow using google-adk and Gemini to analyze findings and recommend adaptive follow-up scans.
- Integrated exploit intelligence, graph-based attack-path visualization, real-time SSE monitoring, and persistent scan reporting.

NexMesh | *Decentralized Federated Learning Network* GitHub

- Implemented federated learning across three clients using MNIST datasets, preserving data locality without sharing raw training samples.
- Configured FedAvg aggregation across five communication rounds with client-side CNN training and server-side model evaluation.
- Containerized NVFlare server and client nodes on a local Kubernetes (Kind) cluster, configuring client-specific dataset mounts for federated training.

FTracker | *Financial Analytics & Access-Control Backend* GitHub | Demo

- Developed RESTful CRUD APIs for financial transactions, categories, and user management with validated inputs and relational persistence.
- Implemented token-based authentication, PBKDF2 password hashing, and RBAC for viewer, analyst, and administrator roles.
- Built SQL-backed financial analytics for income, expenses, balances, and trends, with Alembic migrations and Docker deployment.

Achievements & Certifications

- Codeforces Specialist (Max 1412), CodeChef 3★ (Max 1625), LeetCode Rating 1545, Finalist E-Contest IIT Madras.
- Won Second Prize at WOWVERSE x MESCOE for showcasing ASTRA.
- Reached the Finals of the VELORA Hackathon, showcasing an AI-based IoT Device Scanner.
- Reached the Semi-Finals of the Google Developer Clubs Build & Grow Hackathon, Pune.
- Completed The Complete Python Developer certification covering backend, automation, and machine learning.
